SUMMARY OF TABLES.

In 1908 there were received 60,142 applications for mechanical patents, 1,131 applications for design patents, 202 applications for reissues of patents, 7,685 applications for registration of trade-marks, 860 applications for registration of labels, and 312 applications for registration of prints. There were 33,514 patents issued, including designs, 168 patents reissued, and 5,191 trade-marks, 618 labels, and 220 prints registered. The number of patents that expired was 22,328. The number of allowed applications awaiting the payment of final fees was 12,269, and the number forfeited for non-payment of the final fees 6,502. The total receipts were \$1,896,847.67, the expenditures \$1,712,303.42, and the surplus of receipts over expenditures \$184,544.25. The total balance to the credit of the Patent Office in the Treasury of the United States on January 1, 1909, was \$6,890,725.89.

In proportion to population more patents were issued to citizens of the District of Columbia than to those of any State—1 to every 1,115. Next in order are the following: Connecticut, 1 to every 1,157; Colorado, 1 to every 1,186; California, 1 to every 1,246; New Jersey, 1 to every 1,320; Washington, 1 to every 1,374; Nevada, 1 to every 1,459; Massachusetts, 1 to every 1,516; New York, 1 to every 1,526; Illinois, 1 to every 1,577; Rhode Island, 1 to every 1,654; Oregon, 1 to every 1,782; Ohio, 1 to every 1,826; Oklahoma, 1 to every 1,852; Pennsylvania, 1 to every 2,033; South Carolina, 1 to every 2,062; Idaho, 1 to every 2,100; Montana, 1 to every 2,317; Michigan, 1 to every 2,323; North Dakota, 1 to every 2,381; Arizona, 1 to every

2,458; Minnesota, 1 to every 2,793; Indiana, 1 to every 2,869; Wisconsin, 1 to every 2,947; Utah, 1 to every 3,008; South Dakota, 1 to every 3,161; Iowa, 1 to every 3,208; Missouri, 1 to every 3,253; Nebraska, 1 to every 3,308; New Hampshire, 1 to every 3,317; Kansas, 1 to every 3,388; Delaware, 1 to every 3,770; Wyoming, 1 to every 4,023; Alaska, 1 to every 4,531; Maine, 1 to every 4,538; West Virginia, 1 to every 4,746; Florida, 1 to every 4,805; Vermont, 1 to every 4,909; Maryland, 1 to every 5,174; Texas, 1 to every 5,818; Kentucky, 1 to every 7,641; Virginia, 1 to every 7,785; New Mexico, 1 to every 7,812; Louisiana, 1 to every 8,279; Tennessee, 1 to every 8,281; Georgia, 1 to every 9,273. The fewest patents granted in proportion to the number of inhabitants were in the following States and Territory: Mississippi, 1 to every 15,992; Hawaii, 1 to every 14,000; Alabama, 1 to every 13,647; Arkansas, 1 to every 11,710, and North Carolina, 1 to every 10,941.

As to foreign patents, 1,013 were granted to citizens of Germany; 734 to those of England; 444 to those of Canada; 302 to those of France; 109 to those of Austria-Hungary; 106 to those of Switzerland; 82 to those of Sweden; 59 to those of Belgium; 49 to those of Italy; 46 each to those of New Zealand and Scotland; 38 to those of Russia; 36 each to those of Denmark and Victoria; 33 to those of New South Wales; 30 to those of Transvaal; 24 to those of Norway; 23 to those of the Netherlands; 16 to those of Mexico; 15 to those of Ireland; 12 to those of Tasmania; 10 to those of West Australia; 9 each to those of Cuba, Japan, and Queensland; 8 to those of South Australia; 5 each to those of Roumania and Spain; 3 each to those of Argentina,

Chile, Egypt, India, and Newfoundland; 2 each to those of Algeria, Cape Colony, Natal, and Peru; 1 each to those of Bermuda, Brazil, Colombia, Jamaica, Java, Portugal, and Turkey.

IMPROVED CONDITIONS IN THE PATENT OFFICE.

The reorganization of the Bureau under the system inaugurated by Secretary Garfield has resulted in vastly improving the conditions heretofore existing.

The Bureau has been given twenty-three additional rooms. The force has been augmented and the salaries increased by Congress during the year as follows: Assistant Commissioner from \$3,000 to \$3,500; an additional Assistant Commissioner provided at \$4,500; Chief Clerk, who shall be qualified to act as a Principal Examiner, \$2,500 to \$3,000; Examiners-in-Chief from \$3,000 to \$3,500; a Chief of Classification provided at \$3,600; the Examiners of Trade-Marks and Designs, Interferences, and the forty-two Principal Examiners from \$2,500 to \$2,700; two Law Examiners from \$2,500 to \$2,750; fifty-eight First Assistant Examiners from \$1,800 to \$2,400; sixty-eight Second Assistant Examiners from \$1,600 to \$2,100; seventy-eight Third Assistants from \$1,400 to \$1,800; and one hundred and ten Fourth Assistants from \$1,200 to \$1,500; an additional translator of languages provided at \$1,800; forty-two messengers provided for the examining divisions at \$480 each.

The total increase of force and salaries is as follows: First Session of the Sixtieth Congress, thirty-three Examiners and one clerk, involving an increase in salaries of \$216,610; Second Session, (1908-9,) eleven Examiners and forty-four clerks and messengers, carrying salary increases to the amount of \$54,360. Total increase of force for 1908 and 1909 of eighty-eight employees, and total increase of salaries for same period of \$270,820. Inasmuch as the salaries of the Examiners had not been increased for a period of sixty years, (1848,) it has been most gratifying that this Congress has come to the relief of the Patent Office in so liberal a manner, and especially so in view of a probable deficit in the revenues of the government of \$100,000,000.

CONDITION OF THE WORK.

I take great pleasure in reporting to the Congress that in view of the new conditions created by Congress and the Secretary of the Interior it has been possible to bring up the work of the Patent Office so that it is now current except in five examining divisions out of the forty-one. The work in these five divisions is in such a condition that it will be made current within thirty days or less. It is my purpose to keep the work current in all branches of the Office so long as I remain at the head. The action of Congress and Secretary Garfield in making it possible to accomplish the results attained in a period of six months after the additional force became effective, July 1, 1908, will be received with great gratification by the inventors of the country, who pay the total expenses of this Bureau and are entitled, as has been recognized by the appropriations committees of both Houses, to the long-deferred relief. The work done now is very thorough, and with the present force it will be possible, as I promised the appropriations committees, to act on and pass to issue or

reject the average application for patent within from thirty to sixty days after filing in the Office.

CLASSIFICATION OF PATENTS.

With the establishment of the new Classification Division provided it will enable me to have all the United States patents, which now number 915,000, the foreign patents, about 2,000,000 in number, and the subject-matter embraced in the 85,000 volumes in the Scientific Library, properly classified and digested. When this is accomplished, the work and expense of examination will be lessened by one-third and the future patents issued will have a greater degree of validity attached to them. This system of classifying technical subject-matter is quite perfect in Germany and England, and it is of the greatest importance to complete such a classification in this Office at the earliest possible date.

LEGISLATION.

During the last session of Congress an act amending section 4896, Revised Statutes, was passed and approved by the President May 23, 1908. This section as amended provided that when any person having made a new invention or discovery for which a patent might be granted becomes insane before the patent is granted the right to apply for and obtain the patent shall devolve upon his legally-appointed guardian or representative on the same terms and conditions as the same might have been claimed or enjoyed by him while sane. The existing law did not provide for the relief of an insane inventor.

Congress also amended section 4885, Revised Statutes, which became a law on May 23, 1908. The amendment to this section facilitated the work of the Office in the granting of patents, in that it provides that the patent may be issued at any time within three months after the payment of the final fee, thereby giving ample time within which to perform the necessary work of printing and photolithographing prior to the final acts of signing, sealing, and delivery of the patent.

A provision was also inserted in the Sundry Civil Appropriation Bill providing that in lieu of the fees fixed by section 4934 of the Revised Statutes for recording assignments and other papers in the Patent Office the following rates should be hereafter charged: For recording every paper of 300 words or under, \$1; of over 300 and under 1,000 words, \$2; for each additional 1,000 words or fraction thereof, \$1. Under the law before the amendment was passed the maximum fee that could be charged was \$3, and in many cases it was found that this was wholly inadequate in payment for the work involved in recording the large deeds that were frequently filed. While the new provision has only resulted in an increase of revenue to this Office of approximately \$1,500, it has resulted in the filing of fewer of the voluminous deeds which were filed hitherto, and this, of course, has resulted in a saving of labor.

The bill entitled H. R. 15,843, S. 3,969, amending two sections of the Trade-Mark Act was passed last session by the Senate, but has not as yet been considered by the House of Representatives. The passage of this bill will result in clearing up two points of

practice before this Office, and it is earnestly hoped that the same may pass the House at this session and become a law.

I wish especially to call attention to H. R. 15,838, S. 3,970, which bill was introduced in the Senate by Senator Smoot and was given careful consideration by the Senate Committee on Patents, of which he is chairman. This bill was favorably reported by the Senate Committee and was passed by the Senate after discussion thereon, but no action has as yet been taken upon this bill in the House. This bill relates to practice within the Patent Office and provides for the elimination of one of the three appeals now provided by law within the Patent Office. The burden of this great number of appeals has been continually complained of by those who have felt its weight and borne the consequent expense. The amendments proposed to the various sections of the statute do not in any way change the substance of the law. The bill provides for the merging of the officers constituting the two appellate tribunals in this Office into a single tribunal. It does not create any new office, and it does not legislate any official out of office. I think it can be stated without question that the elimination of one of the appeals within this Office as now provided by law is admitted to be a desirable thing by every one who has any knowledge at all of the procedure required by an applicant for a patent or a party to an interference before he can obtain a final decision in his case.

Some criticisms have been made upon the pending bill, not for the reason, however, that it is not a desirable thing to reduce the number of appeals, but because of certain technical objections to the amendments proposed to the present statutes. I think it can be truthfully said that no objection has been urged against the amended bill which does not apply with more force to the law at present on the statute books.

There is another bill, H. R. 15,840, S. 3,973, which has also passed the Senate, but has not as yet been passed by the House of Representatives, which provides that appeals in trade-mark cases, now taken direct to the Commissioner, shall thereafter be taken to the new Board of Appeals created by the previously-discussed bill. Of course the passage of this bill must depend entirely upon the passage of the one relating to patents. I most earnestly ask that this bill (H. R. 15,838, S. 3,970) be considered by the House of Representatives at this session. The reasons therefor are as follows:

First. It is the practically unanimous opinion of inventors and manufacturers throughout the country that one appeal should be eliminated in the Patent Office in order to save the great cost and loss of time now involved in obtaining a final adjudication and consequent grant of patent.

Second. The fact that no general protest has been lodged and no effective arguments have been made against the passage of the bill.

Third. Scientific journals have favorably commented upon this measure by editorials and otherwise and offered no protest or objection.

Fourth. The great saving of time and labor to the tribunals of the Patent Office. Under the present system the work is done twice to no good effect.

Fifth. This is an important part of the plan to ex-

pedite business and to grant patents to inventors within a reasonable time, which they have demanded and to which they are entitled.

Appeals lie, under existing law in patent matters, from the Primary Examiner, in *ex parte* cases, successively to the Examiners-in-Chief, the Commissioner or the Assistant Commissioner, and to the Court of Appeals of the District of Columbia. Appeals from the Examiner of Interferences in interference cases take the same course.

The following statement shows the amount of business transacted by the appellate tribunals in patent and trade-mark matters during the year ending December 31, 1908.

Three other bills, S. 8,610, 8,611, and 8,612, are now pending in the Senate, and it is earnestly hoped that they may be introduced into the House and that their early enactment into law may be effected.

Senate bill 8,610 provides for the amendment of section 4889 of the Revised Statutes. Certain changes in phraseology of the statute are provided by the bill; but the really essential provision is that there shall be required to be filed with an application for patent, in addition to the drawing, two photographic copies of such drawing. This imposes upon every applicant for patent an additional statutory requirement, to wit—to file with each application of which a signed and attested drawing forms part two photographic copies of such signed and attested drawing.

The purposes of this requirement are (1) to guard against and enable the detection of unauthorized changes in the original drawing or abstraction of such drawing and substitution of another; (2) to lessen the danger of serious mistakes on the part of the Office in failing to detect interferences between copending applications for the same invention.

It is proposed to accomplish the first purpose by causing to be filed in secret archives in charge of the Chief Draftsman one of these photographic copies which may serve as a permanent standard of comparison with the pen and ink drawing from which the copies that form a part of the patent are taken. The drawing may be sent to the attorneys' room upon request of any one appearing of record as having an interest in the application, or it may be changed or abstracted and replaced by any corrupt employee of the Patent Office, leaving no

evidence, or at best mere negative indications that any unauthorized changes have been made. An illuminative example of what unauthorized changes may be made is found in the case of the Heany patent, No. 872,936, where no drawing was filed originally with the application, but one was filed subsequently, which was later abstracted and replaced by another of entirely different character, the last drawing being the one which now forms a part of the patent. If at the time the Heany application was filed all applicants had been required to file a photographic reproduction of the drawing, the changes could hardly have been made without detection, except by the collusion of two or more persons, and with great difficulty.

It is proposed to accomplish the second purpose by retaining the second photographic copy of the drawing in the file-wrapper and sending it with the file to the attorneys' room upon order or to any other division or any tribunal of the Patent Office, when required, leaving the original drawing in the examining division, where the application is classified for examination; or, if for any reason it should become necessary to send the original drawing out of the examining division, the photographic copy could be retained therein, where it would be discovered in interference searches. Under the present procedure both drawing and file-wrapper are sent out of the division on attorneys' orders, also when they are placed in interference or are appealed; and the drawing is frequently sent out on orders of the Official Draftsman or the Chief of the Copy and Manuscript Division for extended periods, amounting, in interference proceedings, to years. While the drawing is out of the examining division interferences between the application of which it forms a part and other subsequently filed applications may be overlooked, as the interference search is made by means of the drawing. The memory of the examiner cannot always be relied upon to recall interfering applications, especially as the personnel of the force changes continually.

The size of the sheets upon which the proposed photographic copies shall be made, their character and disposition, may be left to the discretion of the Commissioner of Patents, who may prescribe, subject to the approval of the Secretary of the Interior, all proper requirements by rule under the authority of section 483 of the Revised Statutes.

It is very clear that it is desirable for applicants filing applications for patent to accompany the same with photographic copies of the drawings. This has been the opinion of my predecessors in office, as ex-Commissioner Butterworth issued an order to this effect, but subsequently revoked it because he was convinced that he could not legally enforce that order without statutory authority. The recent developments in the Patent Office in regard to the tampering with patent records make it essential that the statute be amended as requested, so as to give statutory authority to the requirement of the photographic copies. It may be said, however, that this is the first time that the records of the Patent Office have been tampered with during its history covering a period of one hundred and eighteen years, and it is the only patent so tampered with in more than nine hundred thousand pat-

ents which have been granted by the United States to date.

The other two bills, S. 8,611 and 8,612, provide for slight amendments to sections 4,917 and 4,893, Revised Statutes, to which they apply respectively. These amendments change only the word "claimant" in section 4,893 to read *applicant*, and the word "claimant" in section 4,917 to read *patentee*.

The word "claimant" is not, in my opinion, the proper word to use in these statutes. In all other statutes relating to patents the inventor is formally referred to as an "applicant" or as a "patentee." These two statutes are the only ones using the word "claimant." These amendments, therefore, will bring these statutes into conformity with the other statutes relating to patents.

The application for a patent is not a claim against the Government and the attorney in a patent case is not prosecuting a claim against the Government. The patent, on the contrary, is in the nature of a contract and is so construed by the authorities on the subject and by the courts. The inventor having created something new, offers by his application to fully disclose his invention at once and to give it to the public at the end of seventeen years, provided the United States will allow him to have the exclusive possession thereof in the meantime. In granting a patent for an invention the Government is not parting with anything possessed by the public prior to applicant's disclosure. If the inventor chooses not to disclose his invention, but to practice it in secret, the public is the loser. In payment for the invention the inventor obtains the right to bring suit in the Federal courts against infringers during a period of seventeen years. Among the many cases that might be cited showing that this is the accepted view regarding patents for invention are the following:

In the case of *O. H. Jewell Filter Company v. Jackson* (140 Fed. Rep., 340) the Circuit Court of Appeals for the Eighth Circuit, in a decision rendered August 26, 1905, held as follows, (page 343:)

A patent is, after all, nothing but a contract by which the Government secures to the patentee the exclusive right to vend and use his invention for a few years, in consideration of the fact that he has perfected and described it and has granted its use to the public forever after. The rules for the construction of contracts apply with equal force to the interpretation of patents. The great desideratum here, as there, is to ascertain and give effect to the intention of the parties to the contract when they made it. * * * The contract evidenced by a patent is effected by the acceptance by the Government of a proposition made by the inventor in compliance with the statutes of the United States. Those statutes require him to make his proposition in the form of an application for a patent, which shall contain a written description of his invention and of the manner of constructing and using it, in such full, clear, concise and exact terms as to enable a person skilled in the art to make and use it, and if it consists of a machine, an explanation of its principle and the best mode in which he has contemplated applying this principle, so as to distinguish it from other inventions. The statutes also require the applicant to particularly point out and distinctly claim the part, improvement, or combination which he seeks to secure as his invention. (Rev. St., sec. 4883, U. S. Comp. St. 1901, p. 3383.)

To the same effect are the court decisions of *Blanchard v. Sprague*, (3 Sumner, 535;) *Carr v. Rice*, (1 Fisher's Patent Cases, 198, 200;) *Singer v. Walmley*, (1 Fisher's Patent Cases, 558, 562;) *Goodyear v. Central Railroad of New Jersey*, (1 Fisher's Patent Cases, 626, 634.)

Robinson on Patents, (vol. 1, p. 54,) concerning the patent grant, states:

It makes the reward of the inventor commensurate with the value of his invention to the public. It lays no burden on the people except that of remaining for a while without that which they never yet enjoyed. It is in all respects, if judiciously bestowed and so

construed as to protect the precise thing invented and only that, the nearest approach to a perfect apportionment of recompense to services that the law has ever known.

ATTORNEYS—PATENT BAR.

I desire to invite the attention of the Congress to the necessity for legislation which would result in the establishment of a patent bar. It is suggested that a law be enacted providing that before an individual be permitted to practice before the United States Patent Office he shall be required to first pass an examination as to his moral, legal, and technical qualifications; that a committee shall be appointed by the Commissioner of Patents composed of Patent Office officials and patent attorneys of well-known standing in the profession who shall conduct the examination under the direction of the Commissioner of Patents, and the report of said committee shall be subject to his approval.

NEW BUILDING.

I desire to invite the attention of the Congress to the great necessity existing for more room. The present quarters provided for the Patent Office are wholly inadequate for its needs. The volume of business of the Bureau increases each year, as will be clearly shown by the table embraced in the report giving the increases since the law of 1836 was enacted.

The Patent Office has been more than self-supporting since its creation. The inventors pay for its maintenance, and not one dollar comes from the general tax revenues of the country. The surplus of receipts over expenditures each year is absolutely a net surplus after deducting salaries and every item of expense that is charged to the Bureau.

The net surplus of all years covered into the Treasury on December 31, 1908, is \$6,890,725.89. This sum represents the net earnings of the Patent Office. It is strongly urged that this sum, or so much thereof as may be necessary, will be used for providing a new building, in which ample room will be afforded to properly and promptly transact the business of the inventors, for which they more than pay the total cost.

If I may be permitted, I would suggest the passage at this session of the bill introduced by Senator Daniel on January 24, 1908, (S. 3,954.) The structure and location meet my full approval.

Great Britain and Germany have each erected new buildings for their patent offices, which are in every way more commodious and better adapted to the business intended than the building that now houses the United States Patent Office, although the patent business of either of those countries is but a small fraction of that which is necessary to transact at this Office.

The models forming a part of the records of the Office and which are necessary to consult in the examination of applications and also for use as evidence in court are stored in boxes in the basement and corridors of the Patent Office building, where they are not accessible for the purposes for which they were intended. The general public is also prevented from seeing them, and their value as purely an historical and educational exhibit is entirely lost. This collection should be placed in the new building, as provided in Senator Daniel's bill.

TREATIES.

The treaty between the United States and Japan, which was signed in Washington by Acting Secretary of State Bacon and Baron Takahira, Ambassador of Japan, on May 19, 1908, and ratified by both Governments, and now in force, has been of great value to the inventors and manufacturers of the United States, in that the same affords protection to American patents and trade-marks in Japan, Korea, and China.

It is to be hoped that in the near future treaties with the leading commercial nations may be consummated embracing reciprocal provisions which will relieve inventors and manufacturers from the necessity of working their inventions in the respective countries.

Respectfully submitted.

EDWARD B. MOORE,
Commissioner of Patents.
